Student visa (subclass 500) | Available full-time 16 Nov 2026 to 5 Feb 2027

PROFESSIONAL SUMMARY

Master of Commerce (Artificial Intelligence and Business Analytics) student at Curtin University, with First Class Honours in Geography and a co-authored GIS research paper (ACRS 2023). I analyse data in R, Python and SQL, map it in QGIS and ArcGIS, and present it in Tableau and Power BI. Before I report a pattern, I test whether it is real. Most recently I analysed 142,875 Victorian crash records to show where people walking and cycling in Melbourne are most at risk. Seeking a data analytics, business intelligence or GIS internship in Perth, and graduate roles from July 2027.

SKILLS

Programming and Data: Python (APIs, Matplotlib), SQL, R (tidyverse, sf, ggplot2, R Markdown), Microsoft Excel, data cleaning and validation.

Statistics: Linear and logistic regression, hypothesis testing, chi-square trend tests, time-series trend and seasonal analysis, model comparison (R squared, RMSE, MAE, ROC/AUC).

Visualisation and BI: Tableau (stories, dashboard actions, parameters, forecasting), Power BI (dashboards, DAX).

GIS and Spatial: QGIS and ArcGIS, hot-spot analysis (Getis-Ord Gi*), network analysis, location-allocation, spatial joins, map layout.

Communication: Analyst reports, conference presentations, explaining data to non-technical people.

RELEVANT EXPERIENCE

Marketing Data Analyst | **Sep 2022 – Sep 2023**
Divana, Bangkok, Thailand | Full-time

- Tracked revenue and sales for all 18 Divana branches in Excel and Power BI (DAX), cleaning the data in Excel and Python so every branch could be compared on the same basis.
- Compared sales of 23 products and found one was especially popular with a specific age group, then recommended a campaign aimed at that group, which lifted the product's sales by about 38% within 3 months.

Data-Driven Marketing Intern | **Nov 2022 – Feb 2023**
Like Me X Co., Ltd. / Futureskill, Thailand

- Analysed audience data in Facebook Ads and tracked campaign results in Excel.
- Ran A/B tests on different marketing posts and reported which content suited each type of customer, so the team could match each post to the right audience.

Mapping and GIS Solution Intern | **Apr 2022 – Jun 2022**
THIKNET Co., Ltd., Thailand

- Mapped EV charging stations on main roads in all 77 provinces of Thailand in ArcGIS and SQL for a navigation product.
- Found about 80% of charging stations were in central Thailand, meaning drivers elsewhere had few places to charge.
- Checked every record against its source before committing it, because one wrong point can send a driver the wrong way.

PROJECTS

Walking and Cycling Safety in Melbourne | **Oct 2026**
Independent project | R (sf, dplyr, ggplot2), QGIS, hot-spot analysis
Project: yarida-cv.vercel.app/melbourne-crash.html

- Mapped 142,875 Victorian crash records (2012 to 2025) with hot-spot analysis in R and QGIS, and found that half of the 2021 to 2025 pedestrian and cyclist crashes happened in just 6% of metro Melbourne.
- Showed with a chi-square trend test that pedestrians hit on 80+ km/h roads are far more likely to be killed or seriously hurt than on 40 km/h roads (65% against 41%), a rise too large to be chance.
- Recommended three fixes for those areas (40 km/h zones, separated bike lanes and better street lighting), so councils can focus road safety money where most crashes happen.

ESG and Financial Analytics, Asia-Pacific | **May 2026**
Curtin University, individual project | Tableau
Project: yarida-cv.vercel.app/esg.html

- Measured how ESG score relates to return on assets across 8 Asia-Pacific markets, and found ESG explains only about 2% of the difference in profit between firms, so a high ESG rating alone is a poor guide to profitability.
- Built three linked Tableau dashboards on 15 years of ESG and financial data, showing average ESG scores rose by about a fifth, with China more than doubling.
- Wrote a business analyst report recommending that firms, investors and regulators compare ESG scores under one reporting standard (ISSB), because ratings differ by market.

WeatherWise: Python Weather Advisor | **Oct 2025**
Curtin University, individual project | Python, OpenWeatherMap API, Matplotlib
Project: yarida-cv.vercel.app/weatherwise.html

- Developed a Python app that pulls live five-day forecasts from the OpenWeatherMap API and turns 40 raw three-hourly readings into simple daily highs, lows and rainfall totals.
- Added Matplotlib charts and plain-English questions such as "Will it rain tomorrow in Perth?", answered by an AI API, so people who don't read charts still get a clear answer.

Credit Risk Analysis | **Oct 2025**
Curtin University, group of three | RStudio, R Markdown
Project: yarida-cv.vercel.app/credit-risk.html

- Cleaned a 32,581-row loan dataset in R and found about one in five loans had defaulted. My part: cleaning, charts, regression and write-up.
- Trained a logistic regression model to predict loan default, reaching an AUC of 0.85 on unseen test data, so a lender can see which borrower details signal risk before approving a loan.

Australian Housing Price Regression | **May 2026**
Curtin University, individual project | RStudio, R Markdown
Project: yarida-cv.vercel.app/housing.html

- Analysed quarterly data for five Australian states (2014 to 2025) in R to find what drives house price growth: interest rates, inflation, migration and the COVID-19 period all mattered, while household income did not.
- Compared five nested regression models and found the COVID-19 period added about 2.6 percentage points to quarterly price growth, while election years made no difference.

Published Research: Drugstore Access in Thailand | **2023**
Co-author (field survey, network analysis, maps), ACRS 2023 | ArcGIS, network analysis, location-allocation
Project: yarida-cv.vercel.app/drugstores.html

- Assessed pharmacy access for 511 villages near Bangkok using GPS field survey data and ArcGIS network analysis of 433 drugstores, and found only 199 villages could reach a pharmacy in the medicine pick-up scheme.
- Located 22 new pharmacy sites with location-allocation that would bring 417 villages within reach, so health planners have a ready shortlist of where to add pharmacies.

EDUCATION

Master of Commerce (Artificial Intelligence and Business Analytics) | **2025 – Present**
Curtin University, Perth, Australia
Expected graduation: June 2027

Bachelor of Social Science | **2019 – 2022**
Kasetsart University, Thailand
Major: Geography | First Class Honours

WORK EXPERIENCE

Restaurant Manager | **Sep 2023 – Present**
Six Senses Gourmet Thai, Leederville, Perth WA | Part-time

- Track daily sales to spot best-selling dishes and suggest new menu items; these menu and service changes helped lift the restaurant's Google rating from 3.6 to 4.0 stars.
- Lead and train the restaurant team, including shift supervisors and around 5 staff per shift, keeping orders, payments and service consistent during busy periods.
- Trained around 8 new starters in service standards, ordering and payments.

ACHIEVEMENTS AND CERTIFICATIONS

- Google Data Analytics Professional Certificate, Google / Coursera, 2026.
- Conference presenter, 8th Annual International Academic Conference on Education and Technology, May 2026: presented a Curtin sustainability student project, recognised in the Curtin Vice-Chancellor's communications.
