Student visa (subclass 500) | Available full-time 16 Nov 2026 to 5 Feb 2027

PROFESSIONAL SUMMARY

Master of Commerce (Artificial Intelligence and Business Analytics) student at Curtin University, with First Class Honours in Geography and a co-authored GIS research paper (ACRS 2023). I map data in GIS and R, and I test whether a pattern is real before I report it. Most recently I analysed 142,875 Victorian crash records to show where people walking and cycling in Melbourne are most at risk. Several projects at yarida-cv.vercel.app have a live demo you can try. Seeking a data analytics, business intelligence or GIS internship in Perth, and graduate roles from July 2027.

SKILLS

Programming and Data: Python (APIs, Matplotlib), SQL, R (tidyverse, sf, ggplot2, R Markdown), Microsoft Excel.

Time-Based Data: Trend, seasonal and timing analysis across multi-year records; Tableau forecasting.

Statistics: Linear and logistic regression, hypothesis testing, chi-square trend tests, model comparison (R squared, RMSE, MAE, ROC/AUC).

Visualisation and BI: Tableau (stories, dashboard actions, parameters), Power BI (dashboards, DAX).

GIS and Spatial: Hot-spot analysis (Getis-Ord Gi*), network analysis, location-allocation, spatial joins, map layout.

Communication: Analyst reports, conference presentations, explaining data to non-technical people.

PROJECTS

Walking and Cycling Safety in Melbourne | **Oct 2026**
Independent project | R (sf, dplyr, ggplot2), GIS, hot-spot analysis
Project: yarida-cv.vercel.app/melbourne-crash.html

- Used 142,875 Victorian crash records (2012 to 2025) and hot-spot mapping in R and GIS to analyse where people walking and cycling get hurt, and found that half of the 2021 to 2025 crashes happened in just 6% of metro Melbourne.
- Used a chi-square trend test to show pedestrians hit on 80+ km/h roads are far more likely to be killed or seriously hurt than on 40 km/h roads (65% against 41%), meaning the risk rises with speed and is not due to chance.
- Turned the findings into three targeted fixes (40 km/h zones, separated bike lanes and better street lighting), so councils can focus road safety money on the few areas where most crashes happen.

ESG and Financial Analytics, Asia-Pacific | **May 2026**
Curtin University, individual project | Tableau
Project: yarida-cv.vercel.app/esg.html

- Used 15 years of ESG and financial data for 8 Asia-Pacific markets to build three linked Tableau dashboards, and found average ESG scores rose by about a fifth, with China more than doubling.
- Used a trend line of ESG score against return on assets to show ESG explains only about 2% of the difference in profit between firms, meaning a high ESG rating alone is a poor sign of a more profitable company.
- Wrote a business analyst report with recommendations for firms, investors and regulators, so investors compare ESG scores under one reporting standard (ISSB) instead of ratings that differ by market.

WeatherWise: Python Weather Advisor | **Oct 2025**
Curtin University, individual project | Python, OpenWeatherMap API, Matplotlib
Project: yarida-cv.vercel.app/weatherwise.html

- Used the OpenWeatherMap API in Python to pull live five-day forecasts, and turned 40 raw three-hourly readings into simple daily highs, lows and rainfall totals.
- Used Matplotlib charts and an AI API to answer plain-English questions such as "Will it rain tomorrow in Perth?", meaning people who don't read charts still get a clear answer.

Credit Risk Analysis | **Oct 2025**
Curtin University, group of three | RStudio, R Markdown
Project: yarida-cv.vercel.app/credit-risk.html

- Used a 32,581-row loan dataset in R to analyse who defaults, and found about one in five loans had defaulted. My part: cleaning, charts, regression and write-up.
- Used backward stepwise regression to model borrower income, and flagged a predictor calculated from income itself, meaning its large effect is misleading and should not drive lending decisions.
- Built a logistic regression model to predict loan default, evaluated on accuracy, sensitivity and ROC/AUC, so a lender can see which borrower details signal risk before approving a loan.

Australian Housing Price Regression | **May 2026**
Curtin University, individual project | RStudio, R Markdown
Project: yarida-cv.vercel.app/housing.html

- Used quarterly data for five Australian states (2014 to 2025) in R to analyse what drives house price growth, and found interest rates, inflation, migration and the COVID-19 period all mattered, while household income did not.
- Used five nested regression models to show the COVID-19 period added about 2.6 percentage points to quarterly price growth, meaning the pandemic, not election years, explains the 2020 to 2021 jump.
- Chose the model with the best balance of accuracy and simplicity, so the forecast relies only on factors that actually move prices.

Published Research: Drugstore Access in Thailand | **2023**
Co-author (field survey, network analysis, maps), ACRS 2023 | GIS, network analysis, location-allocation
Project: yarida-cv.vercel.app/drugstores.html

- Used GPS field survey data and GIS network analysis of 433 drugstores near Bangkok, and found only 199 of 511 villages could reach a pharmacy in the medicine pick-up scheme.
- Used nearest-neighbour analysis to show the drugstores cluster along main roads near two hub hospitals, meaning outer villages are left without nearby access.
- Used location-allocation to choose 22 new sites that would bring 417 villages within reach, so health planners have a ready shortlist of where to add pharmacies.

RELEVANT EXPERIENCE

Digital Marketing Executive | **Sep 2022 – Sep 2023**
Divana, Bangkok, Thailand | Full-time

- Tracked campaign performance in Excel and Power BI reports, and used the results to decide what content to make next.
- Wrote SEO-focused content for divanawellness.com and Instagram, based on keyword and customer-interest research.

Data-Driven Marketing Intern | **Nov 2022 – Feb 2023**
Like Me X Co., Ltd. / Futureskill, Thailand | Remote

- Built Excel and Power BI dashboards on content and audience data that the marketing team used to plan campaigns.
- Reviewed campaign results and wrote reports with recommendations for the marketing team.

Mapping and GIS Solution Intern | **Apr 2022 – Jun 2022**
THIKNET Co., Ltd., Thailand

- Used SQL to maintain location data for a commercial navigation product, updating road and route records for every province in Thailand and adding EV charging stations.
- Checked every record against its source before committing it, because one wrong point can send a driver the wrong way.

EDUCATION

Master of Commerce (Artificial Intelligence and Business Analytics) | **2025 – Present**
Curtin University, Perth, Australia
Expected graduation: June 2027

Bachelor of Social Science | **2019 – 2022**
Kasetsart University, Thailand
Major: Geography | First Class Honours

WORK EXPERIENCE

Restaurant Manager | **Sep 2023 – Present**
Six Senses Gourmet Thai, Leederville, Perth WA | Part-time

- Track daily sales to spot best-selling dishes and suggest new menu items, part of the menu and service changes that helped lift the restaurant's Google rating from 3.6 to 4.0 stars.
- Train and lead around 5 staff per shift, and explain decisions clearly to people without time for the detail.

ACHIEVEMENTS AND CERTIFICATIONS

- Google Data Analytics Professional Certificate, Google / Coursera, 2026.
- Conference presenter, 8th Annual International Academic Conference on Education and Technology, May 2026: presented a Curtin sustainability student project, recognised in the Curtin Vice-Chancellor's communications.
