PROFESSIONAL SUMMARY

Master of Commerce (Artificial Intelligence and Business Analytics) student at Curtin University, with First Class Honours in Geography and a co-authored GIS research paper (ACRS 2023). I analyse data in R, Python and SQL, map it in QGIS and ArcGIS, and present it in Tableau and Power BI. Before I report a pattern, I test whether it is real. Most recently I analysed 142,875 Victorian crash records to show where people walking and cycling in Melbourne are most at risk. Seeking a data analytics, business intelligence or GIS internship in Perth, and graduate roles from July 2027.

EDUCATION

Master of Commerce (Artificial Intelligence and Business Analytics) | **2025 – Present**
Curtin University, Perth, Australia
Expected graduation: June 2027

Bachelor of Social Science | **2019 – 2022**
Kasetsart University, Thailand
Major: Geography | First Class Honours

SKILLS

Programming and Data: Python (APIs, Matplotlib), SQL (Oracle), R (tidyverse, sf, ggplot2, R Markdown), Microsoft Excel, data cleaning and validation.

Statistics: Linear and logistic regression, hypothesis testing, chi-square trend tests, time-series analysis, model comparison (R squared, RMSE, MAE, ROC/AUC), machine learning and sentiment analysis (Orange).

Visualisation and BI: Tableau (stories, dashboard actions, parameters, forecasting), Power BI (dashboards, DAX).

GIS and Spatial: QGIS and ArcGIS, hot-spot analysis (Getis-Ord Gi*), network analysis, location-allocation, spatial joins, map layout.

Communication and Teamwork: Analyst reports, presentations, team projects of three and four.

RELEVANT EXPERIENCE

Marketing Data Analyst | **Sep 2022 – Sep 2023**
Divana, Bangkok, Thailand | Full-time

- Tracked revenue and sales for all 18 Divana branches in Excel and Power BI (DAX), cleaning the data in Excel and Python so every branch could be compared on the same basis.
- Compared sales of 23 products and found one was especially popular with a specific age group, then recommended a campaign aimed at that group, which lifted the product's sales by about 38% within 3 months.

Data-Driven Marketing Intern | **Nov 2022 – Feb 2023**
Like Me X Co., Ltd. / Futureskill, Thailand

- Analysed audience data in Facebook Ads and tracked campaign results in Excel.
- Ran A/B tests on different marketing posts and reported which content suited each type of customer, so the team could match each post to the right audience.

Mapping and GIS Solution Intern | **Apr 2022 – Jun 2022**
THIKNET Co., Ltd., Thailand

- Mapped EV charging stations on main roads in all 77 provinces of Thailand in ArcGIS and SQL for a navigation product.
- Found about 80% of charging stations were in central Thailand, meaning drivers elsewhere had few places to charge.
- Checked every record against its source before committing it, because one wrong point can send a driver the wrong way.

ADDITIONAL WORK EXPERIENCE

Restaurant Manager | **Sep 2023 – Present**
Six Senses Gourmet Thai, Leederville, Perth WA | Part-time

- Track daily sales to spot best-selling dishes and suggest new menu items; these menu and service changes helped lift the restaurant's Google rating from 3.6 to 4.0 stars.
- Lead and train the restaurant team, including shift supervisors and around 5 staff per shift, and have trained around 8 new starters in service standards, ordering and payments.

PROJECTS

Walking and Cycling Safety in Melbourne | **Oct 2026**
Independent project | R (sf, dplyr, ggplot2), QGIS, hot-spot analysis
Project: yarida-cv.vercel.app/melbourne-crash.html

- Mapped 142,875 Victorian crash records (2012 to 2025) with hot-spot analysis in R and QGIS, and found that half of the 2021 to 2025 pedestrian and cyclist crashes happened in just 6% of metro Melbourne.

- Showed with a chi-square trend test that pedestrians hit on 80+ km/h roads are far more likely to be killed or seriously hurt than on 40 km/h roads (65% against 41%), a rise too large to be chance.
- Recommended 40 km/h zones, separated bike lanes and better street lighting for those hot-spot areas.

AI-Driven Customer Support: Analysis and Automation | **2026**
Curtin University, individual report and team of four | Orange Data Mining, machine learning, sentiment analysis
Project: yarida-cv.vercel.app/cloudcore.html

- Used AI text analytics in Orange on 360 support tickets and 240 reviews, and showed two sentiment tools found at most 58% of unhappy customers against a 70% target, so they were not fit to automate.
- Built the team's machine learning workflow that scores 280 customers for churn risk (77.5% of at-risk customers found) and automatically produces a weekly list of 14 to call, 12 of them truly at risk.

ESG and Financial Analytics, Asia-Pacific | **May 2026**
Curtin University, individual project | Tableau
Project: yarida-cv.vercel.app/esg.html

- Built three linked Tableau dashboards on 15 years of ESG and financial data for 8 Asia-Pacific markets, and found ESG explains only about 2% of the difference in profit between firms, so a high ESG rating alone is a poor guide to profitability.
- Wrote a business analyst report recommending that firms, investors and regulators compare ESG scores under one reporting standard (ISSB), because ratings differ by market.

WeatherWise: Python Weather Advisor | **Oct 2025**
Curtin University, individual project | Python, OpenWeatherMap API, Matplotlib
Project: yarida-cv.vercel.app/weatherwise.html

- Developed a Python app that pulls live five-day forecasts from the OpenWeatherMap API, turns 40 three-hourly readings into daily highs, lows and rainfall with Matplotlib charts, and answers plain-English questions through an AI API.

Soccer Competition Database | **2026**
Curtin University, individual project | Oracle SQL, ERD, data dictionary
Project: yarida-cv.vercel.app/soccer-database.html

- Translated 18 business rules into a normalised 16-table Oracle schema with an entity relationship diagram and data dictionary, then wrote 13 SQL queries (joins, subqueries, aggregation) that produce the season ladder, top scorers and most valuable player.

Credit Risk Analysis | **Oct 2025**
Curtin University, group of three | RStudio, R Markdown
Project: yarida-cv.vercel.app/credit-risk.html

- Cleaned a 32,581-row loan dataset in R, found about one in five loans had defaulted, and trained a logistic regression model that predicts default with an AUC of 0.85 on unseen test data. My part: cleaning, charts, regression and write-up.

Australian Housing Price Regression | **May 2026**
Curtin University, individual project | RStudio, R Markdown
Project: yarida-cv.vercel.app/housing.html

- Compared five nested regression models of quarterly house price growth in five Australian states (2014 to 2025) in R, and found the COVID-19 period added about 2.6 percentage points to quarterly growth, while election years made no difference.

Published Research: Drugstore Access in Thailand | **2023**
Co-author (field survey, network analysis, maps), ACRS 2023 | ArcGIS, network analysis, location-allocation
Project: yarida-cv.vercel.app/drugstores.html

- Assessed pharmacy access for 511 villages near Bangkok using GPS field survey data and ArcGIS network analysis of 433 drugstores: only 199 villages could reach a pharmacy, and 22 new sites found with location-allocation would bring that to 417.

RECOGNITION AND CERTIFICATION

- Google Data Analytics Professional Certificate, Google / Coursera, 2026.
- Co-author, 2023 Asian Conference on Remote Sensing (ACRS 2023) paper: Service Area and Spatial Distribution Pattern of Drugstores in Nonthaburi Province.
